

VALIDATION

- * Validation is the process of ensuring that data is both correct and secure.
- * we have two types of validation:
 - * 1. SchemaType validation
 - * 2. Custom validation
- *
- * SchemaType validation:
 - * 1. required
 - * 2. minlength
 - * 3. maxlength
 - * 4. match
 - * 5. enum
- *
- * Custom validation:
 - * 1. validate
 - * 2. async validate
 - * 3. validateSync
 - * 4. async validateSync
 - * 5. runValidators
 - * 6. isAsync
 - * 7. validator
